Irrigation water management quality criteria must be met for Tier III participation. For CSP, the minimum requirement for water quantity – irrigation water management on cropland or pastureland is considered achieved when the current level of treatment and management for the system results in a water use efficiency value using CSP Irrigation Enhancement Index Tool of at least 50 %.

A producer can improve the irrigation enhancement index value by agreeing to implement various irrigation enhancement actions listed in the Index Tool that will result in higher index rating.

Documentation Requirement: Attached copy of CSP Irrigation Enhancement Index Tool Calculation.

I certify that the information provided for the Modified FIRI calculation is correct.
